

Thoracic Pathology

The Yale Thoracic Pathology Team is a key partner crucial to the success of the thriving thoracic oncology program here at the Smilow Cancer Hospital. Our team receives referrals nationally and from around the world. Recent advances in oncology make possible the targeting of therapies to the specific tumor a patient may have. This personalized medicine requires the close collaboration of clinicians, pathologists, radiation oncologists, and surgeons. Our pathologists provide both conventional tumor typing on biopsies and cutting edge molecular classification, by which a mutational spectrum is obtained for the purpose of selecting the best biological therapies to target the malignant behavior of the tumor

G. Kenneth Haines, III, M.D. Associate Professor of Pathology Director, General Surgical Pathology Services Associate Director, Pathology Residency Program

Adebowale Adeniran, M.D. Assistant Professor of Pathology
